

Overview

Wasteland Adventure: Expansion Pack

Day 1

Revisiting, improving, and expanding your original project — now with a partner.

OVERVIEW

What You're Doing

You and a peer will revisit your original Wasteland Adventure project and release **Version 2.0 — The Expansion Pack**. Your goal is to improve your original work, add new features, and refine your code so it feels more like a real game.

You will choose the SAME level that you completed previously.

This time, you'll focus on:

1. **Fixing anything that didn't work**
2. **Upgrading your backpack system**
3. **Expanding your map**
4. **Adding new lore + user-driven story elements**
5. **Improving code quality, comments, and structure**
6. **Adding a proper game introduction + credits**

You will work with a partner, but each of you will submit your own improved file.

Required Upgrades (All Levels)

1. Fix Your Code

- Review your original project together.
- Identify bugs, confusing sections, or missing features.
- Add comments explaining what you fixed.
- Use comments while you work to identify what still needs to be changed/added.

2. Upgrade the Backpack

- Must include **user input**.
- May include a **loop** (recommended for Power-Up and Legendary).
- You must still print the **full backpack**, but:
 - **Comment out** the lines where you printed items using indexing
 - (after verifying they work)
 - This keeps the final program cleaner and more game-like.

3. Expand Your Map

Your new map must be **larger than your original**:

- If you originally made **3×3 or 5×5**, upgrade to **10×10**
- If you originally made **10×10**, upgrade to **20×20**

Your map must also include:

- A **border or decoration**
- A **map key printed beside the map**, not below it
 - Example:

User-named locations

- (You will ask the user to name the places marked 1, 2, 3, and X)
- You can include *more* locations on the map.

4. Expand Your Lore + Story

Your story must now include:

- User-named locations
- At least one additional user input (e.g., character name, faction name, weather, etc.)
- A reference to your expanded map
- At least one backpack item (using indexing, even if the print line is commented out)
- More detail than your original version

5. Add a Game Introduction

At the top of your program, print:

- The **title** of your game
- "Developed by: ____" (your name)
- "Expansion Pack collaboration with: ____" (your partner's name)

Expectations for Code Quality

Your code should include:

- Comments explaining what each section does
- Notes about what needs improvement or what you changed
- Clean formatting
- Clear variable names
- No leftover debugging prints (except the commented-out indexing lines)

Examples

Example: Introduction

Code

Python

```
print("=== WASTELAND ADVENTURE: EXPANSION PACK ===")
print("Developed by: Jordan M.")
print("Expansion Pack collaboration with: Riley S.")
print()
```

Example: Commenting Out Indexing Tests

Code

Python

```
# print(backpack[0])    # works, but commented out for final version
# print(backpack[-1])   # works, but commented out for final version
```

Example: Asking the User to Name Map Locations

Code

Python

```
loc1_name = input("Name the location marked '1' on your map: ")
loc2_name = input("Name the location marked '2': ")
loc3_name = input("Name the location marked '3': ")
safezone_name = input("What should the final safe zone (X) be called? ")
```

Example: Using User Input in Lore

Code

Python

```
print(f"As I approached {loc1_name}, the wind shifted...")
```

Example: Border + Key Beside Map (Concept Only)

Code

Python

```
print("+-----+          MAP KEY")
print("| . . 1 . . . . . |    0 = You")
print("| . . . . . . . . |    X =", safezone_name)
print("| . 0 . . . . . . . |    1 =", loc1_name)
...
```

Starter

STARTER LEVEL

Starter Upgrade Requirements

- Backpack now includes **user input**
- Map increases from **3×3** → **5×5 or 10×10**
- Add a border
- Ask the user to name **1, 2, 3, and X**
- Add a short expanded story using the new names
- Add a game introduction
- Comment out indexing tests after verifying them

Starter Focus

- Clean, readable code
- Good comments
- Simple user input
- A clear, improved map

Power-Up

POWER-UP LEVEL

Power-Up Upgrade Requirements

- Backpack includes **multiple user inputs**
- Optional: add a **loop** for adding items
- Map increases from **5×5** → **10×10**
- Border + key printed beside the map
- User-named locations
- Expanded lore with at least **two user inputs**
- Game introduction + partner credit
- Commented-out indexing tests

Power-Up Focus

- More customization
- Cleaner formatting
- More detailed story
- More advanced map layout

Legendary

LEGENDARY LEVEL

Legendary Upgrade Requirements

- Backpack uses a **while loop**
- Optional: sorting, searching, or removing items
- Map increases from **10×10** → **20×20**
- Border + key printed beside the map
- User-named locations
- Expanded lore with **multiple user inputs**
- Optional: add a path, weather system, or random event
- Game introduction + partner credit
- Commented-out indexing tests

Legendary Focus

- Complexity
- Creativity
- Clean structure
- Game-like feel
- Strong commenting and organization

Day 1 Worksheet

Peer Review Companion Sheet

Day 1

Section 1 — Code Walkthrough

Partner A explains their code while **Partner B** asks:

- “What part of your code are you most confident in?”
- “What part was hardest to write?”
- “What do you want to improve?”

Partners switch roles.

Section 2 — Bug Hunt + Improvement Notes

Feature / Problem to Solve	Improvement Status	Notes
Backpack works correctly	Completed ▾	
Indexing prints work (to be commented out later)	Completed ▾	
Map prints correctly	Completed ▾	
Map formatting issues	Completed ▾	
Story requirements met	Completed ▾	
Missing introduction	Completed ▾	
Missing comments	Needs to be fixed ▾	
Hard-to-read code	Needs to be fixed ▾	
Variable names are unclear	Completed ▾	
Something is broken in your code	Completed ▾	

Section 3 — Required Upgrades Planning

Backpack upgrade idea:	Use item added into backpack later on
Map expansion plan (new size + details):	new places to visit through out the game
Describe how you will use user input:	Backpack, different path
Story/lore additions:	Escaping the place

Introduction + credits plan:	Make introduction more easier to understand
------------------------------	---

Section 4 — Questions We Asked Each Other

Questions I asked my partner:	How did you do your backpack?
Questions my partner asked me:	How did you do user input?
