

Game Studio Concept Project: Team Notes

Here is the document where your team can take notes throughout the course of your project. Everyone in the group should be added to this document as well as JAFox7@cps.edu.

Table of Contents

[Roles + Responsibilities](#)

[Concept + Genre](#)

[Game Mechanics + Player Engagement](#)

[Connect it to the Game Development Team](#)

[Story + Characters](#)

[Level + World Design](#)

[Gameplay](#)

[Sketches](#)

[AI-Generated Art](#)

[Monetization Strategy](#)

Roles + Responsibilities

Think about the roles on a game development team as well as the roles on a group project. Assign roles to each group member based on their strengths.

Name	Roles + Responsibilities

Concept + Genre

Copy any basic ideas and notes about your game here!

Genre/Game Concept Category:

--

Describe the basic details of your game concept:

Include any discussion notes here about your game concept or genre:

Game Mechanics + Player Engagement

Include any discussion notes here about how your game will keep players engaged and what game mechanics you will utilize.

Connect it to the Game Development Team

Describe how people on the game development team would contribute to this game. Identify what research and tasks each member would have to complete in order to break the larger concept/idea (creating your finished game) down into smaller parts.

Use the 9 roles we covered previously (including Audio Designer) to do this exploration.

Story + Characters

Describe in a minimum of 4 paragraphs (20+ sentences) the story that your characters are experiencing in the game. This can be backstory, the story that your players will uncover during gameplay, or something else. Give details about the world and what story is attached to your game.

If your game is not one that consists of characters, then describe what alternatives you use to having characters.

Describe the story in this box:

Include descriptions of major characters in this box. Name them and give a description so you may introduce these characters to your classmates. Describe their appearance, personality, special abilities, and defining characteristics. You may even decide they fit a certain personality type that we talked about in class! Include any character descriptions below:

Level + World Design

Describe the game's world and how players progress between levels or objectives, providing a general overview. Additional detail to help listeners visualize the player's experience is appreciated.

Include notes from discussion(s) about level and world design here.

Gameplay

Describe the gameplay in this box. What does the player do? What platform can they access your game on? Describe the essentials of gameplay, including a few scenarios that a player might play through.

Sketches

Insert any preliminary art and/or sketches below. What does the game interface look like? What is viewable on the screen while playing? These don't need to be masterpieces but they can help you determine what elements need to be fleshed out more. Drop images of your sketches in the box below:

AI-Generated Art

Use AI (DALL-E 2 using Mr. Fox's credentials) to generate sketches of your characters, world, and a gameplay scenario (with emphasis on characters and the world). Each group can submit 10 prompts to generate their images. So everyone can have a turn, please limit yourself to 10 prompts/image generations.

Drop your images below:

Monetization Strategy

Explain how your game will make money.
