

My Quarter 1 Skill Story

This page isn't new content — it's your own record of the quarter. Fill it in honestly. What have you learned about how *you* learn?

The Quarter 1 Skill Map

Week	Skill	Core Question
3	Numbers & Operations	Does my answer make sense?
4	Fractions & Decimals	Which form should I use?
5	Percent	What is this a percent of?
6	Ratios, Rates & Proportions	What two quantities am I comparing?
7	Variables & Expressions	What does this symbol represent?
8	Equations	What value makes both sides equal?

Each skill built on the one before it. This week's Growth Check tests all six together — without telling you in advance which skill each question needs.

Recognizing a skill without being told: “A recipe calls for 3 eggs for every 2 cups of flour. A baker uses 9 eggs. How many cups of flour are needed?” This never announces “ratio problem” — that recognition is part of the skill.

What I Knew in Week 2 vs. What I Know Now

Some skills (numbers, basic fractions) can be compared directly to your Week 2 baseline. Percent, ratios, expressions, and equations weren't tested then — those count as new mastery, not growth from a prior score.

A skill I can compare directly to my baseline:

What changed between then and now:

Reading My Results

Not just a score. Your Growth Check results use the same three categories from Week 2:

Current strengths
Skills you now demonstrate consistently, including any growth since Week 2.

Developing skills
Skills you partially demonstrate.

Priority skills
Skills that need continued instruction or review heading into Quarter 2.

My Error Pattern

Look back through your exit tickets, checks, and error-analysis work from Weeks 2–8. Tally how often each error type shows up.

Error Type	Tally
Knowledge	
Process	
Execution	
Comprehension	
Strategy	

My Quarter 1 Story

My strongest skill, and my evidence:

A developing skill, and my evidence:

A priority skill, and my evidence:

My most frequent error type across the quarter, and my evidence:

My Goal for Quarter 2

One specific, actionable goal:

One strategy I'll use to work toward it:

Carry This Into Quarter 2

STOP → FIND → CONNECT → TRY → CHECK

Knowledge → Process → Execution → Comprehension → Strategy

Quarter 2 (Mathematical Reasoning) opens with **Inequalities & Constraints** — the same equation-solving logic from Week 8, plus one new rule: the inequality symbol flips when you multiply or divide both sides by a negative.
