

SEMINAR III • WEEK 9

Quarter 1 Consolidation

No new content this week. We're looking back at the whole quarter at once, and answering a question that matters for the rest of the year: what have you learned about how you learn?

PART 1

One Connected System, Not Six Reviews

THE QUARTER 1 SKILL MAP

Each skill built on the one before it. This week's Growth Check tests all six together — without telling you in advance which skill each question needs.

THE REAL SHIFT THIS WEEK

Which skill does this problem need — if it doesn't say?

A recipe calls for 3 eggs for every 2 cups of flour. A baker uses 9 eggs. How many cups of flour are needed?

This never announces "ratio problem." That recognition is the same skill the ACT and real situations demand.

ERROR PATTERNS ACROSS THE QUARTER

Which Category Shows Up Most in Your Work?

Type	Look For
Knowledge	Same "I don't remember this" error in more than one week
Process	Errors during multi-step procedures (two-step equations, proportion setups)
Execution	Small arithmetic/sign mistakes despite a correct approach
Comprehension	Misreading the question (e.g. part-to-whole vs. part-to-part)
Strategy	An inefficient approach when a faster one existed

Use real evidence — your exit tickets and checks from Weeks 2–8 — not a guess.

PART 2

The Quarter 1 Growth Check

Same framing as the Week 2 baseline: informative, not punitive.

WHY YOU'RE TAKING THIS

- It measures retention and transfer across all six Quarter 1 skills.
- It compares directly to your Week 2 baseline where possible.
- It surfaces what needs continued attention heading into Quarter 2.

READING THE RESULTS

Not just a score.

Numbers and fractions can compare directly to your Week 2 baseline. Percent, ratios, expressions, and equations weren't tested then — those count as **new mastery**. You'll see the same Strength / Developing / Priority language from Week 2, not "you scored 21/31."

PART 3

Analyze Your Results, Set a Quarter 2 Goal

THREE CATEGORIES

Current Strengths

Skills you now demonstrate consistently, including any growth since Week 2.

Developing Skills

Skills you partially demonstrate.

Priority Skills

Skills that need continued instruction or review heading into Quarter 2.

YOUR QUARTER 1 REFLECTION

Name five things, each with real evidence.

- 1. Your strongest skill
- 2. A developing skill
- 3. A priority skill
- 4. Your most frequent error type across the quarter
- 5. One specific, actionable goal for Quarter 2

WHILE YOU WORK

Learn to tell these two apart:

"I don't know this."

"I knew this, but made a mistake."

Connect your specific missed questions to a specific error type — not just "I'm bad at math."

TRANSITION TO QUARTER 2 · WEEK 10

Inequalities & Constraints

Same inverse-operation logic as Week 8's equations, plus one new rule: the inequality symbol flips when you multiply or divide both sides by a negative.
